### BE SAFE - SET THAT SYSTEM!!!

Here are some sobering statistics:

- + crime is up for burglaries all over St. Louis City and suburbs
- + burglaries are still driven by people addicted to drugs
- + 50% of all homes burglarized are not locked
- + many people do not set the alarm during the day and at night

So here is the magic way to protect you and your family:

1. Check that all doors and windows are locked.
2. Always set the system when you leave and at night - it is a good habit.
3. The newer systems have great options to make setting the system very easy. You can add keychain transmitters, smart phone app control and email or text that will remind you if you are all out of the home and you forgot to set the system. Just a simple push of a button on your phone and the system is set.

### THE STAR IS YOUR FRIEND!!

If you lose power or phone line, your GE Interlogix system will warn you with a beeping noise from all the keypads.

Just remember the star(\*) button on your keypad when pressed will silence the beeping and display the trouble signal.

If a power outage is occurring, you may have to press the star(\*) key 12 hours later until the power is restored.

Need help - call our office and ask to have a technician paged.

### KIDS COMING HOME FROM SCHOOL

We have several types of video systems along with texts from your GE Interlogix system to let you know the kids arrived home and turned off the system. The picture is optional but very comforting.

## “PROFESSIONAL GRADE”

“We sell systems that are professional grade.”

We have always, for almost 40 years, had the attitude that our products are life safety.

Buying products that are second best and on sale is always a mistake. Our systems last 10 to 15 years and are a very good investment.

We get calls everyday about big box store video systems that do not work after a year or two and guess what, “no parts available”.

New do it yourself systems, as you might guess, are cheap systems missing supervision, lithium long life batteries and do not come with service. The old adage “you get what you pay for” still applies.

Our systems are attractively priced, the best equipment we can find and our staff is highly trained and very helpful.

That is what we do - professional grade systems and staff.

## NEW PRODUCTS

Wireless intercom/video/doorbell:

- + easy to install
- + makes your family safer
- + great convenience
- + enhances your system

## TEMPORARY SYSTEMS

## SELLING YOUR RELATIVES HOUSE

More and more families have to hold a home or put it up for sale and the house is vacant after a close relative goes into assisted living or passes away.

We now have temporary systems that we can install at a reasonable installation charge and a monthly monitoring fee that includes the phone app control to remotely control the alarm. When you sell the home we remove the temp system. Call our office for more information.

## ALZHEIMERS

Do you have a relative with Alzheimer’s?

We have temporary systems that monitor doors to let you know with the voice module and phone app text that an exterior door has been opened.

We also have video if you need it.

This could be a step before assisted living .

Call our office for more information.
